Session 1.1 | Addressing Inequalities

Card Sorting as a Methodology for Discovering Underlying Needs of Communities Seeking to Develop Learning Spaces: Towards a Better Understanding of the Sociocultural Ecology

Trottier 0060 (Session A) | Research

Marguerite Koole | *University of Saskatchewan*

Gordon Rugg | *Keele University*

Thiago Lemes de Oliveira | *Wolverhampton University*

Valentina Arancibia | *Federal University of Uberlândia*

Redouane Touati. | *Universidad Católica del Maule & Yahia Fares University, Médea*

i Abstract

In this paper, we focus on a knowledge elicitation method called single-criterion card sorting. To begin, we will provide a background two of the communities with whom we have been working: a Deaf and Hard of Hearing community in Canada and a community in Algeria. After briefly describing the context of the project, we will provide a description of, rationale for, and challenges with card sorting as a preliminary method. Next, we will explain the card-sorting procedures, present the preliminary data, and explain the analysis procedures. Although there are many kinds of card sorting, we will guide participants through a hands-on exercise using single-criterion card sorting (using both digital and in person techniques). Participants will learn about text-based, image-based, and object-based options, when to use card sorting, how to collect data, and how to analyse card sorting data through visual-numeric ‘heat maps’ (co-occurrence matrices). We can share a free Java-based software tool for generating heat maps.

Put simply, the paper provides a discussion of the data and how the data will guide the selection of subsequent knowledge modelling methods that will guide further analysis and hopefully help to gain a better, in-depth understanding of the communities’ needs and aspirations that may otherwise remain hidden beneath social, cultural, and linguistic barriers. With careful selection of knowledge modelling methods, we hope to help limit bias and the perpetuation of English and Western ways of doing and knowing. Meaningful consultation and collaboration can help to ensure that the communities’ interests remain at the heart of the project(s) and reduce Western (‘outsider’) control of research, analysis, and development.

Session 1.2 | Transitions of Online Learning and Teaching

Evolving our understanding of technology-integrated assessment: A review of the literature and development of a new framework

Trottier 2100 (Session C) | Research

Colin Madland | *University of Victoria*

Valerie Irvine | *University of Victoria*

Christopher DeLuca | *Queens University*

Okan Bulut | *University of Alberta*

i Abstract

In this paper, we review the literature on technology in assessment in higher education and compare how the literature aligns with the Assessment in a Digital World framework (Bearman et al., 2022). We found themes in the literature that were not present in the framework (e.g., academic integrity and faculty workload) and constructs in the framework not evident in the literature (e.g., future self and future activities). Additionally, we consider other gaps in both the framework and the literature evident in day-to-day practices and government legislation or mandates, such as considering legal or ethical aspects of duty of care and the integration of Indigenous worldviews. We then developed the Technology-Integrated Assessment Framework to help instructors and administrators consider a broader range of constructs when planning assessment strategies in technology-integrated learning environments and to serve as a basis for further investigation into how the different constructs within the framework contribute to how we design, implement, and teach about assessment in digital learning environments today. We present an introduction of this technology-integrated assessment framework, invite feedback from the OTESSA community, and discuss future research goals and opportunities.

Session 1.3 | Addressing Inequalities

Critical reflections on course materials: The rise of the single-use e-textbook and a university library's multi-pronged response

Trottier 2110 (Session D) | Research

Madelaine Vanderwerff & Sara Sharun | *Mount Royal University*

i Abstract

A recent shift by higher education publishers from print to digital content has led to an increase in course instructors adopting digital textbooks and courseware that are rented or sold directly to students. These digital courseware systems are attractive for a number of reasons: they are customizable, contain integrated value-added features, and are often marketed as inclusive, accessible, and cost-saving. However, there is debate about the impact of these tools on student learning and success, and about the challenges they create for learners, including restricting, controlling, and monitoring access and use. Our library has undertaken a number of distinct but related initiatives to support faculty in transitioning away from commercial textbooks in their courses. In this session, we will share a number of initiatives that invite faculty to critically reflect on course material selection, raise awareness about the challenges of commercial textbooks, and offer support for transitioning to OER, freely available, or library-licensed materials in their courses.

This session will share findings from our research and collaboration with stakeholders on campus.

Participants will be invited to share their experiences and discuss the potential long-term impacts of, and responses to, the commercialization and commodification of learning materials on their campuses.

10:30-11:00 | Break

11:00-12:00 | Concurrent Session 2 | Ethics in Design Showcase

All Session 2 Showcases are in the Trottier Mezzanine

Showcase 2.1 | Sustaining Positive Change

Design of Learning Experiences for Cyranoids & Echoborgs

Amanda Tkaczyk | *Independent Scholar*

i Abstract

Cyranoids are individuals whose communication is determined by another person in real time (Milgram S., 1992). Echoborgs, a subset of Cyranoids, are individuals whose communication is determined by artificial intelligent agents (Corti, K., & Gillespie, A., 2015). With the widespread adoption of generative artificial intelligence tools that will enable the next generation of Echoborgs with highly sophisticated tools to mediate their human-to-human interactions, we are thrilled to explore the design of educational experiences for Cyranoid and Echborg learners. This project will include instructional materials and tools to support the learning and professional development of Echoborgs in your classroom, community, and workplaces. Online attendees can review materials and interact with chatbots. In-person attendees will have the opportunity to engage with a kiosk of learning materials and practice their interactions with a live Echborg learner. This critical design project will present an exploration of how the future of education might adapt in response to AI-augmented & AI-dependent learners. We will explore themes of technology adoption, responsibility, ethics, equity, and care in this speculative educational design project.

Showcase 2.2 | Transitions of Online Learning and Teaching

Artifacts from the Futures of Higher Education

Elisa Arnold, Rocio Chavez Telleria & Laura Viselli | *eCampus Ontario*

Abstract

How we think about the future informs the decisions we make today; however, it is sometimes difficult to imagine what the future might look like. Foresight is a discipline and methodology that helps us think systematically about possible ways the future might play out and expands the solution space. Experiential futures, a subset of foresight methodology, is a way to consider different possible futures by interacting with imagined objects or environments of the future and develops capacity for futures thinking.

The Research and Foresight team at eCampusOntario has created four artifacts, grounded in foresight methodology, capturing different ways one can think about technology in higher education. These artifacts are based on the team's foresight trend research and explore possible future roles of technology. To facilitate the discussion and support analysis, we will use a foresight informed discussion toolkit developed by our team. This workshop will introduce attendees to the methodology of experiential futures to advance their capacity for futures thinking.

Showcase 2.3 | Addressing Inequities

Generative Friction: A Chatbot Interface Experiment

Ben Taylor & Devon Mordell | *McMaster University*

Abstract

Faced with the rapid adoption of generative artificial intelligence (GAI) in everyday life, educators are working to envision the role of this technology and routinely navigating its ethical use. Although the broader social, cultural, and environmental costs of the technology are well-documented, they are normally obscured by digital user interface experiences that “just work.” The practice-based design exhibit we are proposing is a GAI chatbot application that intentionally disrupts the user interface with details about the effects of each text input and output beyond the surface of the computer screen. Drawing on critical interface analyses, speculative design methods, and an interrogation of dark design patterns, we will attempt to make visible the past and potential future effects of GAI, including resource consumption, exploitative labour practices, perpetuation of biases, and an increase in economic divides. During this session, we will demo the

application and then allow for full audience engagement with the exhibit as we speak to the documentation of our design process. Our intention is to introduce a thoughtful and generative friction into the chat interaction, reclaiming so-called malicious techniques (e.g., distraction, interruption, obfuscation, and shock) to playful and socially productive ends.

Showcase 2.4 | Addressing Inequities

Decolonizing Educational Design: Toward Justice by Design in Higher Education

Rebecca Sweetman & Yasmine Djerbal | *Queen's University*

Abstract

As institutions commit to strategic initiatives for justice in higher education, this session shares practical ways to walk the decolonial talk in the design of education. Delving into critical design as a transformative tool and pedagogy, we seek to shift how storytellers in higher education craft their narratives. This presentation confronts how we, practically, design an equitable future of learning, including the applied skills required to recognize and challenge our normative biases and design assumptions, and transform our day-to-day work in educational design.

Examining how to mitigate curricular harms and consider the ethics of educational technologies, we introduce a justice by design framework that strategically dismantles oppressive, racist, and colonial epistemologies that unconsciously make their way into course design. Through this presentation, we practice design justice principles and share an open professional training curriculum called “[Activist Design in Educational Multimedia](#)” as an opportunity for intervention. The curriculum employs theoretical and practical techniques to develop the competencies and confidence of educational design professionals to apply an anti-oppressive lens in their work. This session presents a multifaceted, practical, and principled approach to critical design that can be integrated across roles, disciplines, and hierarchies to re-story the process and outcomes of educational design.

Supporting OER Adoptions through Federated Discoverability

Practice

Don Eldridge | *eCampus Ontario*

i Abstract

A key aspect of supporting OER adoption remains OER discoverability, which is commonly reported as a barrier to OER adoption as part of finding relevant resources and the time required to adopt (Belikov, & Bodily, 2016; Lantrip & Ray, 2021). This open data initiative includes the development of a metadata schema with crosswalks, technical configurations using Open Archives Initiative Protocol for Metadata Harvesting, and a collaborative pilot project to test and implement the technical solution. At the time of this proposal submission, the initiative is federating out the library metadata records to 24 post-secondary institutions. Lessons learned include working with consortiums and shared technology services, evaluating the value of federation for a wide range of post-secondary institutions, and the impact for future collaborations.

3:25 - 3:45 | Session 3.2 | Sustaining Positive Change

Means to an End? Ethical Methodologies for Developing Ethical Facial Recognition Training Datasets

Research

Jin Sol Kim, Amanda Yu, Lai-Tze Fan & Tatum Weicker-O'Connor | *University of Waterloo*

i Abstract

In January of 2020, The New York Times published a report on the implications of Clearview AI's facial recognition system in law enforcement. However, unlike other discussions of facial recognition in this field, which focus on the consequences of racial biases within the system, this report revealed the problematic methodology behind the development of Clearview AI's robust training dataset, calling for an examination of ethics in the very process of creating ethical tech. Clearview AI has since been banned in countries including Canada for scraping over three billion photos from social media platforms, breaching privacy laws surrounding consent for use of personal data. Yet the challenge remains: how can we create a fair and robust training dataset for facial recognition algorithms given the resource-intensive nature of the task as well as complications such as the limitations of data privacy? How can we ensure that the means of creating ethical facial recognition technologies mirror its ends? With current rapid developments in generative AI, synthetic training datasets have newly emerged as a promising player in the field of facial recognition technologies. Training datasets such as Digi-Face 1M that are entirely composed of generated images seem to waive the need for ethical considerations altogether by skirting the use of human subjects. Nevertheless, insofar as the application of these tools affect human lives, we must question whether this new method of dataset development is truly free from ethical concerns.

Trottier 2100 (Session C)

Planning, living, and adding to our plates: : K-3 educators' experiences of curricula in Virtual Learning Environments (VLE)

Practice Melissa Bishop | *University of Prince Edward Island*

i Abstract

Virtual Learning Environments (VLE) have interested scholars since the late 20th century, with much of the research focusing on secondary and post-secondary instructors and learners (Brown, 2010; Dabbagh, 2007; Fuchs, 2014; Plump & LaRosa, 2017; Proserpio

& Gioia, 2007). With the onset of VLEs in elementary education due to the COVID-19 pandemic and the continuation of synchronous virtual learning thereafter, VLEs have become commonplace in K-3 contexts across Ontario. Yet, as we contend with the ubiquitous nature of technology in early elementary, a paucity of literature exists regarding teachers' and Early Childhood Educators' (ECE) experiences of planned and lived curricula (Muldong et al., 2021; Aperribai et al., 2020; Ferdig et al., 2020) in VLEs. Starting from standpoint epistemologies (Au, 2012; Harding, 1991; Haraway, 2003), reflecting on five narrative interviews, and employing a narrative analysis of field texts (Clandinin, 2006; Clandinin & Connelly, 1988, 1996, 2000), we unearthed six narrative threads: time, parent communication, relationship building, classroom community, engagement and teacher presence, and technological challenges. These six threads suggested how ECEs and teachers navigated the entanglements of planned and lived curricular experiences in VLEs. Further, the five threads exposed critical elements to be considered in future VLE policy and curricular reform in the K-3 context.

Session 4.2 | Transitions of Online Learning and Teaching

Tech-based teaching practices and student engagement from the perspective of self-determination theory

Trottier 2110 (Session D)

Géraldine Heilporn, Mourad Majdoub & Fatme Diab | *Université Laval*

Abstract

Teachers can enhance inclusion and provide personalized learning experiences for students by utilizing digital tools and prioritizing inclusive teaching methods (Kim et al., 2019). However, Cabellos et al. (2023) have argued that digital resources were used more to transmit information than to engage students in their learning. The widespread and necessary use of ICT has not served to make learning student-centered but was primarily aimed at the transmission and evaluation of the content. Thus, students' motivation and engagement are significantly affected, worsening the existing issues regarding low school motivation, especially in secondary school (Cai et al., 2022). In response to these research gaps, the aim of this communication is to explore high school teachers' technology-based teaching methods that motivate and address the needs of learners with the use of technology based on the digital divide framework (Van Dijk, 2020), SDT (Self-Determination Theory) (Ryan & Deci, 2017) and student engagement model (Archambault et al., 2019). We have conducted individual semi-structured interviews with high school teachers aiming to obtain in-depth qualitative data mainly through open-ended questions. A thematic analysis has been employed to inductively analyze the interview data and generate pos-

sible themes and categories based on the objectives of our study. The findings and recommendations for future research will be shared at OTESSA conference.

Session 4.3 | Sustaining Positive Change

Open Learning Design in an Inquiry-based Educational Setting

Research

Trottier 0070 (Session B)

Maryam Shirdel Pour & Michael Paskevicius | *University of Victoria*

i Abstract

Inquiry-based learning as a pedagogical approach encourages students to explore and investigate real-world problems and foster a deeper understanding of concepts as they actively connect new information to their existing mental frameworks (Martell, 2022). Educators are increasingly recognizing the value of creating an engaged learning environment that promotes collaboration and allows for personalized and meaningful learning experiences (Bui & Khuu, 2020). Inquiry-based learning may require that learners engage in networking beyond formal academic settings and connect with professionals, peers, and resources in various fields that could foster their deeper engagement with learning (Robert, 2022).

Open Educational Practices (OEP) tend to create cooperative teaching and learning practices in which the focus is on the role of the learners and the impact that their participation will have on the learning process and practice (Mayrberger, 2020; DeRosa & Robinson, 2017; Author. 2019). Students could benefit from the principles of OEP to engage in open and dynamic conversations to collectively build a deeper understanding of the subject and share their ideas and inquiry work widely while following copyright guidelines. This study, therefore, aspires to investigate the effects of incorporating OEP in an educational environment centred around inquiry.

Franchir les obstacles : Améliorer l'accessibilité grâce aux ressources éducatives libres dans l'apprentissage intégré au travail

Andrea Krasznai | *eCampus Ontario*

Abstract

Le projet d'apprentissage expérientiel d'eCampusOntario, le Consortium d'apprentissage expérientiel francophone de l'Ontario (CAPFO), rassemble les institutions postsecondaires francophones et bilingues de l'Ontario pour combler une lacune : le manque d'opportunités d'apprentissage expérientiel dans les environnements francophones et bilingues. En utilisant la plateforme Riipen, nous offrons aux membres du CAPFO la possibilité d'augmenter le nombre d'opportunités disponibles pour leurs apprenants au-delà des frontières géographiques de la province. Dans le cadre de ce projet, une nouvelle lacune a été mise en lumière : le manque de ressources en français pour les professeur.e.s souhaitant s'impliquer dans l'apprentissage intégré au travail. eCampusOntario a créé des ressources éducatives libres (REL) pour soutenir les professeur.e.s dans le développement de leurs connaissances en matière d'apprentissage intégré au travail. De plus, une enquête de recherche a été menée dans le secteur francophone de l'Ontario pour dévoiler les tendances et les défis, désormais disponibles sous forme de rapport REL dans la bibliothèque ouverte d'eCampusOntario, la plus grande bibliothèque ouverte au Canada. Au cours de notre session, nous fournirons des informations sur ce qu'est le CAPFO et mettrons en lumière les exigences particulières de la communauté minoritaire franco-ontarienne engagée dans l'apprentissage intégré au travail (AIT). Nous aborderons ensuite les ressources éducatives libres (REL), comment elles peuvent améliorer l'expérience des professeur.e.s dans l'AIT et dévoilerons quelques conclusions clés de notre rapport. Finalement, nous fournirons à notre public un guide REL afin qu'ils puissent initier l'expérimentation et la création de leurs propres REL.

Session 5.2 | Wildcard

Trottier 0070 (Session B) | Practice

9:30 - 10:30 | Unveiling the Future of Language Teaching and Acquisition: Exploring the Conflation of Cultural Historical Activity Theory, and Generative AI

Tanya Dixit & Michael Paskevicius | *University of Victoria*

Abstract

Contemporary technology trends in education are profoundly reshaping the design of teaching and learning languages. This trajectory, Li (2017) observes, can be largely attributed to the “development of learning theories and pedagogical considerations” (p.3) alongside several other contributing factors, a sentiment echoed by Blake (2009) and Heift and Chapelle (2012) who confirm the far-reaching influence and potential of CALL,

which further offers substantial promise to refine and enhance second language (L2) acquisition. Moreover, these scholars unanimously agree that technology integration and implementation should be firmly grounded in research built upon theoretical foundations. Hence, conjoining Cultural Historical Activity Theory (CHAT) (Engeström, 1987) and the affordances of generative AI, exemplified by ChatGPT, this presentation looks at transformative opportunities in which current AI bots can reform classroom teaching-learning discourse. This comprehensive awareness about AI's potentiality to revamp instructional methods, improve learner engagement, and offer avenues for personalizing and differentiating instruction is to be deemed essential not only for equipping stakeholders with the knowledge to navigate the nuances and challenges inherent in optimizing language acquisition experiences, but also to set the stage for a future where learners and educators can seamlessly integrate cutting-edge tools and technologies into improving the language acquisition experience.

10:00 - 10:30 | Personalized learning path in a course on digital technology for secondary education programs

Géraldine Heilporn, Alexandre Lepage, Audrey Raynault & Julie Chamberland |
Université Laval

i Abstract

This communication presents the new design of a course on digital technology for teaching and learning, offered to students enrolled in secondary education programs at Laval University (Quebec), based on the concept of adaptive learning. Following a diagnostic assessment questionnaire of their digital competency at the beginning of the semester, students are automatically assigned to three thematic activities aimed to develop their digital competency for transfer to secondary education. After working on a thematic activity for one week, students return to the classroom for peer-to-peer teaching and learning on these thematic activities, in a blended course modality alternating asynchronous (thematic activities) and synchronous classes (peer-to-peer teaching and learning). Temporary thematic support communities as well as disciplinary learning communities are set to encourage peer collaboration and support throughout the semester. At given time-points during the semester, students also have to assess their peer collaboration and give them feedback a peer evaluation mechanism.

Session 5.3 | Sustaining Positive Change

Trottier 2100 (Session C)

9:30 - 10:30 | Developments in National OER Advocacy in Canada

Ann Ludbrook | *Toronto Metropolitan University*

Michael McNally | *University of Alberta*

Abstract

This 50-minute session builds upon the Canadian Association Research Libraries (CARL)'s National Advocacy Framework for Open Educational Resources (OER) in Canada (2023). It updates attendees on national OER advancements, and features insights from the Indigenous Knowledges and OER summit held in Vancouver in February 2024. The summit produced principles for working with Indigenous knowledges in OER, alongside discussions on progressing national OER advocacy. The session covers developments in policy, infrastructure, and francophone OER stemming from summits in 2022 and 2023. Reports from these events will be discussed, along with updates on ongoing federal budget consultations and the anticipated 2025 federal election. The audience will also have the opportunity to contribute ideas and strategies for national advocacy, via group discussion and polls.

An e-Book of One's Own: Empowering Student Learning Journeys

Practice

Terry Greene & Christian Metaxas | *Trent University*

Abstract

Join our interactive session to explore the transformative initiative, “An e-Book of One’s Own,” designed to reshape the student experience in higher education. In a dynamic environment, participants will engage with Pressbooks, a powerful tool enabling students to craft personalized e-books showcasing their academic journey. The session emphasizes hands-on exploration, collaborative problem-solving, and interactive structures to work towards successful implementation. Reflective exercises simulate the student experience, fostering a deep understanding of the program’s impact. This session is not a passive presentation; it’s a collective effort to redefine educational experiences. Attendees will leave with practical insights, strategies for implementation, and a renewed vision for empowering students through digital innovation.

Session 7.2 | Wildcard & Transitions of Online Learning and Teaching

Trottier 2110 (Session D)

1:30 - 1:50 | Triads to Complete Capstone: e-Portfolios

Practice

Christine Ho Younghusband | *University of Northern British Columbia*

Abstract

For one graduate program at a small research university in British Columbia, completing a digital portfolio is one option for capstone to demonstrate learning and conclude the program. The portfolio option includes developing a WordPress site, articulating one’s learning through the lens of a guided question, and a presentation of the portfolio to a committee. The student and committee members are led by a faculty supervisor. Completion of this capstone can be an isolating experience. In one term, two graduate students were left without a supervisor and needed to complete the program that term. One faculty member supervised three graduate students at one time. Over time, the three graduate students formed a triad, or small learning community, where they supported,

peer-assessed, and collaborated in an ongoing way to complete their portfolios. The outcomes were personalized and unique to the learner. This presentation is a program evaluation that investigates the value and impact of triads during capstone and portfolio to invite back humanity into the capstone and portfolio experience.

1:55 - 2:15 | Using AI to design a Culturally Responsive STEM course and improve sense of belonging among students

Research

Nahid Pourdolat Safari & Behnoosh Khoramrooz | *University of Victoria*

i Abstract

This session aims to explore the integration of AI in Culturally Responsive Teaching (CRT) to enhance the sense of belonging in STEM education. Focusing on the importance of CRT in developing a sense of belonging and as a result, in enhancing motivation, engagement, persistence and academic performance, this presentation will discuss the theoretical foundations of CRT and explore implementing AI-generated content in STEM course design to foster a more inclusive learning environment. This session will delve into how AI can validate and acknowledge students' cultural backgrounds in STEM classes with a focus on underrepresented groups, including Indigenous, Black and international students. By showcasing practical examples, this session intends to demonstrate how AI technologies can be used to motivate and engage STEM students from diverse cultural backgrounds by improving their sense of belonging.

2:15 - 2:45 | Break

2:45 - 3:45 | Unconference

3:45 - 4:00 | Break with Coffee & Snack Provided

Session 8.1 | Addressing Inequities

Trottier 2100 (Session C)

Survivors of Complex Trauma as Adult Online Learners

Research

Hilary Schmidt | *Thompson Rivers University*

Abstract

Complex trauma is both a product and a source of significant multidimensional inequality, including profound disruption to survivors' educational trajectories. Nonetheless, little research has been conducted on trauma-informed educational practices for adult/postsecondary or open/online learners, and educational researchers have largely ignored the perspectives of survivors, contradicting the key principle of collaboration within a trauma-informed approach.

This qualitative instrumental collective case study explored how adults with a history of complex trauma experience postsecondary open/online learning. Findings included participants' struggles with executive functioning, challenges regulating emotion and dealing with a heightened perception of threat, re-experiencing trauma, negative beliefs about the self, and difficulties navigating relationships. These trauma impacts affected not only participants' learning and course experience, but also their experience of applying, registering, and accessing financial aid. Nonetheless, participants are demonstrably skilled in managing impacts of their trauma and are driven to learn, placing the highest intrinsic value on education. Top priorities for implementation of trauma-informed educational practices identified by participants included establishing safety; trust and transparency; and empowerment, voice, and choice. Implications are discussed, including enhancing equity and inclusion for survivors of complex trauma and assisting open/online postsecondary institutions in meeting their unique needs through implementation of trauma-informed educational practices.

Session 8.2 | Addressing Inequities

Trottier 2110 (Session D)

Protecting Indigenous Knowledge in Open Education

Don Eldridge & Mary Gu | *eCampus Ontario*

Abstract

As open educational practices (OEP) and open educational resources (OER) grants, programs, and initiatives are created by organizations, there is a need to consider the

diverse and nuanced Equity, Decolonization, Diversity, and Inclusion (EDDI) issues that will be surfaced. Funding institutions and agencies must consider how their support and promotion of OEP and OER may not support and may even alienate Indigenous members of their community. This presentation will provide an overview of the EDDI concerns faced in a major investment into an OER program in Canada that impacted multiple postsecondary institutions through 3 years of work. This presentation will share the development process of a geographically specific Commons license, the metrics on uptake since the launch of the license, and the impact on supporting digital-by-design virtual learning. This experience can inform the broader open education community by sharing lessons learned and best practices as a case study.

Creating Reskilling and Upskilling Opportunities for Internationally Educated Immigrants through Online Learning Programs: The Story of Success

Practice

Marina Grineva | *Intercultural Skills Lab (Rotman School of Management, University of Toronto)*

Abstract

The importance of access to reskilling and upskilling opportunities for immigrants can't be overestimated. However, there is a number of challenges that this population faces while trying to integrate into the workforce or advance in their careers in Canadian work environments. One of such challenges is the inability to attend professional development programs in-person. From this perspective, technology-enhanced learning, specifically, on-line or hybrid learning environments (a combination of asynchronous and synchronous learning sessions) are one of the solutions of the problem.

In this presentation, we aim to provide the overview of professional development programs offered by [The Intercultural Skills Lab](#) (Rotman School of Management, University of Toronto) that successfully provides reskilling and upskilling opportunities for internationally trained immigrants by creating a variety of technology-enhanced learnings environments. Specifically, we will demonstrate how through the use of a number of online learning tools the program participants are given an opportunity to become part of vibrant collaborative learning communities fostering professional development in such areas as intercultural intelligence, effective communication, career management, as well

as in the sector-specific disciplines.

Card Sorting as a Methodology for Discovering Underlying Needs of Communities Seeking to Develop Learning Spaces: Towards a Better Understanding of the Sociocultural Ecology

Trottier 0060 (Session A) | Research

Marguerite Koole | *University of Saskatchewan*

Gordon Rugg | *Keele University*

Thiago Lemes de Oliveira | *Wolverhampton University*

Valentina Arancibia | *Federal University of Uberlândia*

Redouane Touati. | *Universidad Católica del Maule & Yahia Fares University, Médea*

i Abstract

In this paper, we focus on a knowledge elicitation method called single-criterion card sorting. To begin, we will provide a background two of the communities with whom we have been working: a Deaf and Hard of Hearing community in Canada and a community in Algeria. After briefly describing the context of the project, we will provide a description of, rationale for, and challenges with card sorting as a preliminary method. Next, we will explain the card-sorting procedures, present the preliminary data, and explain the analysis procedures. Although there are many kinds of card sorting, we will guide participants through a hands-on exercise using single-criterion card sorting (using both digital and in person techniques). Participants will learn about text-based, image-based, and object-based options, when to use card sorting, how to collect data, and how to analyse card sorting data through visual-numeric ‘heat maps’ (co-occurrence matrices). We can share a free Java-based software tool for generating heat maps.

Put simply, the paper provides a discussion of the data and how the data will guide the selection of subsequent knowledge modelling methods that will guide further analysis and hopefully help to gain a better, in-depth understanding of the communities’ needs and aspirations that may otherwise remain hidden beneath social, cultural, and linguistic barriers. With careful selection of knowledge modelling methods, we hope to help limit bias and the perpetuation of English and Western ways of doing and knowing. Meaningful consultation and collaboration can help to ensure that the communities’ interests remain at the heart of the project(s) and reduce Western (‘outsider’) control of research, analysis, and development.

Session 1.2 | Transitions of Online Learning and Teaching

Evolving our understanding of technology-integrated assessment: A review of the literature and development of a new framework

Trottier 2100 (Session C) | Research

Colin Madland | *University of Victoria*

Valerie Irvine | *University of Victoria*

Christopher DeLuca | *Queens University*

Okan Bulut | *University of Alberta*

i Abstract

In this paper, we review the literature on technology in assessment in higher education and compare how the literature aligns with the Assessment in a Digital World framework (Bearman et al., 2022). We found themes in the literature that were not present in the framework (e.g., academic integrity and faculty workload) and constructs in the framework not evident in the literature (e.g., future self and future activities). Additionally, we consider other gaps in both the framework and the literature evident in day-to-day practices and government legislation or mandates, such as considering legal or ethical aspects of duty of care and the integration of Indigenous worldviews. We then developed the Technology-Integrated Assessment Framework to help instructors and administrators consider a broader range of constructs when planning assessment strategies in technology-integrated learning environments and to serve as a basis for further investigation into how the different constructs within the framework contribute to how we design, implement, and teach about assessment in digital learning environments today. We present an introduction of this technology-integrated assessment framework, invite feedback from the OTESSA community, and discuss future research goals and opportunities.

Session 1.3 | Addressing Inequalities

Critical reflections on course materials: The rise of the single-use e-textbook and a university library's multi-pronged response

Trottier 2110 (Session D) | Research

Madelaine Vanderwerff & Sara Sharun | *Mount Royal University*

i Abstract

A recent shift by higher education publishers from print to digital content has led to an increase in course instructors adopting digital textbooks and courseware that are rented or sold directly to students. These digital courseware systems are attractive for a number of reasons: they are customizable, contain integrated value-added features, and are often marketed as inclusive, accessible, and cost-saving. However, there is debate about the impact of these tools on student learning and success, and about the challenges they create for learners, including restricting, controlling, and monitoring access and use. Our library has undertaken a number of distinct but related initiatives to support faculty in transitioning away from commercial textbooks in their courses. In this session, we will share a number of initiatives that invite faculty to critically reflect on course material selection, raise awareness about the challenges of commercial textbooks, and offer support for transitioning to OER, freely available, or library-licensed materials in their courses.

This session will share findings from our research and collaboration with stakeholders on campus.

Participants will be invited to share their experiences and discuss the potential long-term impacts of, and responses to, the commercialization and commodification of learning materials on their campuses.

Showcase 2.1 | Sustaining Positive Change

Design of Learning Experiences for Cyranoids & Echoborgs

Amanda Tkaczyk | *Independent Scholar*

i Abstract

Cyranoids are individuals whose communication is determined by another person in real time (Milgram S., 1992). Echoborgs, a subset of Cyranoids, are individuals whose communication is determined by artificial intelligent agents (Corti, K., & Gillespie, A., 2015). With the widespread adoption of generative artificial intelligence tools that will enable the next generation of Echoborgs with highly sophisticated tools to mediate their human-to-human interactions, we are thrilled to explore the design of educational experiences for Cyranoid and Echborg learners. This project will include instructional materials and tools to support the learning and professional development of Echoborgs in your classroom, community, and workplaces. Online attendees can review materials and interact with chatbots. In-person attendees will have the opportunity to engage with a kiosk of learning materials and practice their interactions with a live Echborg learner. This critical design project will present an exploration of how the future of education might adapt in response to AI-augmented & AI-dependent learners. We will explore themes of technology adoption, responsibility, ethics, equity, and care in this speculative educational design project.

Showcase 2.2 | Transitions of Online Learning and Teaching

Artifacts from the Futures of Higher Education

Elisa Arnold, Rocio Chavez Telleria & Laura Viselli | *eCampus Ontario*

Abstract

How we think about the future informs the decisions we make today; however, it is sometimes difficult to imagine what the future might look like. Foresight is a discipline and methodology that helps us think systematically about possible ways the future might play out and expands the solution space. Experiential futures, a subset of foresight methodology, is a way to consider different possible futures by interacting with imagined objects or environments of the future and develops capacity for futures thinking.

The Research and Foresight team at eCampusOntario has created four artifacts, grounded in foresight methodology, capturing different ways one can think about technology in higher education. These artifacts are based on the team's foresight trend research and explore possible future roles of technology. To facilitate the discussion and support analysis, we will use a foresight informed discussion toolkit developed by our team. This workshop will introduce attendees to the methodology of experiential futures to advance their capacity for futures thinking.

Showcase 2.3 | Addressing Inequities

Generative Friction: A Chatbot Interface Experiment

Ben Taylor & Devon Mordell | *McMaster University*

Abstract

Faced with the rapid adoption of generative artificial intelligence (GAI) in everyday life, educators are working to envision the role of this technology and routinely navigating its ethical use. Although the broader social, cultural, and environmental costs of the technology are well-documented, they are normally obscured by digital user interface experiences that “just work.” The practice-based design exhibit we are proposing is a GAI chatbot application that intentionally disrupts the user interface with details about the effects of each text input and output beyond the surface of the computer screen. Drawing on critical interface analyses, speculative design methods, and an interrogation of dark design patterns, we will attempt to make visible the past and potential future effects of GAI, including resource consumption, exploitative labour practices, perpetuation of biases, and an increase in economic divides. During this session, we will demo the

application and then allow for full audience engagement with the exhibit as we speak to the documentation of our design process. Our intention is to introduce a thoughtful and generative friction into the chat interaction, reclaiming so-called malicious techniques (e.g., distraction, interruption, obfuscation, and shock) to playful and socially productive ends.

Showcase 2.4 | Addressing Inequities

Decolonizing Educational Design: Toward Justice by Design in Higher Education

Rebecca Sweetman & Yasmine Djerbal | *Queen's University*

Abstract

As institutions commit to strategic initiatives for justice in higher education, this session shares practical ways to walk the decolonial talk in the design of education. Delving into critical design as a transformative tool and pedagogy, we seek to shift how storytellers in higher education craft their narratives. This presentation confronts how we, practically, design an equitable future of learning, including the applied skills required to recognize and challenge our normative biases and design assumptions, and transform our day-to-day work in educational design.

Examining how to mitigate curricular harms and consider the ethics of educational technologies, we introduce a justice by design framework that strategically dismantles oppressive, racist, and colonial epistemologies that unconsciously make their way into course design. Through this presentation, we practice design justice principles and share an open professional training curriculum called “[Activist Design in Educational Multimedia](#)” as an opportunity for intervention. The curriculum employs theoretical and practical techniques to develop the competencies and confidence of educational design professionals to apply an anti-oppressive lens in their work. This session presents a multifaceted, practical, and principled approach to critical design that can be integrated across roles, disciplines, and hierarchies to re-story the process and outcomes of educational design.

Supporting OER Adoptions through Federated Discoverability

Practice

Don Eldridge | *eCampus Ontario*

i Abstract

A key aspect of supporting OER adoption remains OER discoverability, which is commonly reported as a barrier to OER adoption as part of finding relevant resources and the time required to adopt (Belikov, & Bodily, 2016; Lantrip & Ray, 2021). This open data initiative includes the development of a metadata schema with crosswalks, technical configurations using Open Archives Initiative Protocol for Metadata Harvesting, and a collaborative pilot project to test and implement the technical solution. At the time of this proposal submission, the initiative is federating out the library metadata records to 24 post-secondary institutions. Lessons learned include working with consortiums and shared technology services, evaluating the value of federation for a wide range of post-secondary institutions, and the impact for future collaborations.

3:25 - 3:45 | Session 3.2 | Sustaining Positive Change

Means to an End? Ethical Methodologies for Developing Ethical Facial Recognition Training Datasets

Research

Jin Sol Kim, Amanda Yu, Lai-Tze Fan & Tatum Weicker-O'Connor | *University of Waterloo*

i Abstract

In January of 2020, The New York Times published a report on the implications of Clearview AI's facial recognition system in law enforcement. However, unlike other discussions of facial recognition in this field, which focus on the consequences of racial biases within the system, this report revealed the problematic methodology behind the development of Clearview AI's robust training dataset, calling for an examination of ethics in the very process of creating ethical tech. Clearview AI has since been banned in countries including Canada for scraping over three billion photos from social media platforms, breaching privacy laws surrounding consent for use of personal data. Yet the challenge remains: how can we create a fair and robust training dataset for facial recognition algorithms given the resource-intensive nature of the task as well as complications such as the limitations of data privacy? How can we ensure that the means of creating ethical facial recognition technologies mirror its ends? With current rapid developments in generative AI, synthetic training datasets have newly emerged as a promising player in the field of facial recognition technologies. Training datasets such as Digi-Face 1M that are entirely composed of generated images seem to waive the need for ethical considerations altogether by skirting the use of human subjects. Nevertheless, insofar as the application of these tools affect human lives, we must question whether this new method of dataset development is truly free from ethical concerns.

Planning, living, and adding to our plates: : K-3 educators' experiences of curricula in Virtual Learning Environments (VLE)

Practice Melissa Bishop | *University of Prince Edward Island*

i Abstract

Virtual Learning Environments (VLE) have interested scholars since the late 20th century, with much of the research focusing on secondary and post-secondary instructors and learners (Brown, 2010; Dabbagh, 2007; Fuchs, 2014; Plump & LaRosa, 2017; Proserpio

& Gioia, 2007). With the onset of VLEs in elementary education due to the COVID-19 pandemic and the continuation of synchronous virtual learning thereafter, VLEs have become commonplace in K-3 contexts across Ontario. Yet, as we contend with the ubiquitous nature of technology in early elementary, a paucity of literature exists regarding teachers' and Early Childhood Educators' (ECE) experiences of planned and lived curricula (Muldong et al., 2021; Aperribai et al., 2020; Ferdig et al., 2020) in VLEs. Starting from standpoint epistemologies (Au, 2012; Harding, 1991; Haraway, 2003), reflecting on five narrative interviews, and employing a narrative analysis of field texts (Clandinin, 2006; Clandinin & Connelly, 1988, 1996, 2000), we unearthed six narrative threads: time, parent communication, relationship building, classroom community, engagement and teacher presence, and technological challenges. These six threads suggested how ECEs and teachers navigated the entanglements of planned and lived curricular experiences in VLEs. Further, the five threads exposed critical elements to be considered in future VLE policy and curricular reform in the K-3 context.

Session 4.2 | Transitions of Online Learning and Teaching

Tech-based teaching practices and student engagement from the perspective of self-determination theory

Trottier 2110 (Session D)

Géraldine Heilporn, Mourad Majdoub & Fatme Diab | *Université Laval*

Abstract

Teachers can enhance inclusion and provide personalized learning experiences for students by utilizing digital tools and prioritizing inclusive teaching methods (Kim et al., 2019). However, Cabellos et al. (2023) have argued that digital resources were used more to transmit information than to engage students in their learning. The widespread and necessary use of ICT has not served to make learning student-centered but was primarily aimed at the transmission and evaluation of the content. Thus, students' motivation and engagement are significantly affected, worsening the existing issues regarding low school motivation, especially in secondary school (Cai et al., 2022). In response to these research gaps, the aim of this communication is to explore high school teachers' technology-based teaching methods that motivate and address the needs of learners with the use of technology based on the digital divide framework (Van Dijk, 2020), SDT (Self-Determination Theory) (Ryan & Deci, 2017) and student engagement model (Archambault et al., 2019). We have conducted individual semi-structured interviews with high school teachers aiming to obtain in-depth qualitative data mainly through open-ended questions. A thematic analysis has been employed to inductively analyze the interview data and generate pos-

sible themes and categories based on the objectives of our study. The findings and recommendations for future research will be shared at OTESSA conference.

Session 4.3 | Sustaining Positive Change

Open Learning Design in an Inquiry-based Educational Setting

Research

Trottier 0070 (Session B)

Maryam Shirdel Pour & Michael Paskevicius | *University of Victoria*

i Abstract

Inquiry-based learning as a pedagogical approach encourages students to explore and investigate real-world problems and foster a deeper understanding of concepts as they actively connect new information to their existing mental frameworks (Martell, 2022). Educators are increasingly recognizing the value of creating an engaged learning environment that promotes collaboration and allows for personalized and meaningful learning experiences (Bui & Khuu, 2020). Inquiry-based learning may require that learners engage in networking beyond formal academic settings and connect with professionals, peers, and resources in various fields that could foster their deeper engagement with learning (Robert, 2022).

Open Educational Practices (OEP) tend to create cooperative teaching and learning practices in which the focus is on the role of the learners and the impact that their participation will have on the learning process and practice (Mayrberger, 2020; DeRosa & Robinson, 2017; Author. 2019). Students could benefit from the principles of OEP to engage in open and dynamic conversations to collectively build a deeper understanding of the subject and share their ideas and inquiry work widely while following copyright guidelines. This study, therefore, aspires to investigate the effects of incorporating OEP in an educational environment centred around inquiry.
